**Before mobile clinic:**

Ideally, call a worker or crew leader at the camp first.
- Ask if anyone is ill at the camp with a fever, cough, sore throat, or shortness of breath.

- Seek permission from your agency first.
- Only one outreach worker and one provider will visit the camp.
- Follow the instructions below.

**During mobile clinic:**

In a camp not suspected of being infected, all patients will be asked at the beginning of clinic either verbally (privately) or in writing if they have had fever or cough.

If "yes"

- Outreach worker: Stay in car and support provider by phone.

- Provider:
  - Wear full PPE (gown, gloves, mask and eye shield) while seeing all patients.
  - Clean equipment, table, and counter after sick patients with 70% alcohol or bleach solution.
  - Separate use of exam table and countertops between sick patients by 1 hr.

All but one provider and one outreach worker immediately leave the camp.
